MU-Source:
I: According to DIN ISO 11352 as expanded, combined measurement uncertainty with k = 2 (95 %), sampling not included

Decision rules:
m: The conformity assessment of microbiological measured values is performed without considering additional analytical measurands.
y: In conformity assessment, measurement uncertainty is disregarded for measured values below the tolerance limit. For measured values exceeding the tolerance limit, measurement uncertainty is subtracted from the measured value. If no conformity assessment is performed, measurement uncertainty serves as informational data only.

°° According to DIN EN ISO 7218, this result must be stated as an estimated number for statistical reasons.
The value given is not statistically significant.
